Enterprise Architecture, without Modeling it Yourself

EAMplicity is our modular subscription service: We create, maintain and evaluate your enterprise architecture model. You make the decisions, we keep the foundation up to date.

What is EAMplicity?

An enterprise architecture model maps your entire company structure – from process and IT landscape down to the individual computer. Maintaining it regularly takes time and expertise. EAMplicity does it for you.

We make dependencies, risks, synergies and redundancies visible, so you can use your company's digital twin as a strategic resource.

Who is it for?

Growing small and medium-sized companies with extensive IT, many systems and distributed responsibilities.

Typical Occasions:

Creating transparency & stability, reorientation, market entry, certification.

What You Achieve with EAMplicity

01
Recognize Vulnerabilities

Make system breaks, gaps and risks transparent and evaluate them centrally.

02
Analyze Effects

Simulate changes, tap savings potential and target measures precisely.

03
Traceable Regulations

Present processes, risks and controls compactly in audits – recertification becomes routine.

Your Benefits

Cost-Effective
Subscription model instead of in-house EAM specialists.

Ready in No Time
A digital model of your company in the shortest possible time.

Central Knowledge
Independent of individuals and available anytime.

Guaranteed Up-to-Date
Regular updates keep your decision basis fresh.

Equal Cooperation
Partnership as equals – from SME to SME.

40+ Years of Experience
In modeling and certification support.

One Foundation, Four Add-Ons

Start with the Basic package and flexibly extend your subscription with up to four modules, matching the focus of your corporate strategy.

BASIC PACKAGE · REQUIRED FOR ALL MODULES

Your Complete EA Model

We capture your entire hardware, application and process landscape and provide it to you in real time in Bpanda. A dedicated contact person regularly enters changes and keeps your model up to date at all times.

Standard Reports Answer Questions such as:

- Which software and hardware exist and how are they connected?
- Which applications communicate with each other?
- Which processes depend on each other?
- Which applications run on which machines?

MODULE 1

Risk

Regular analyses and reports on risks in processes, applications and IT.

MODULE 2

What if ...?

Impact analyses show you the consequences of failures and changes in advance.

MODULE 3

Certification Support

Complete reports and documentation for your audits.

MODULE 4

Notification

Timely alerts on maintenance contracts, licenses and certificates.

New Regulations? Your Model has the Answers.

EU CRA, NIS-2, DORA and CSRD require complete evidence. With your EA model, SBOMs, risk assessments and supply chains are documented at all times – without additional data collection.

EU CRA | NIS-2 | DORA | CSRD

How to Get Started

1

Workshop

Clarify your goals and starting point with an EAM consultant.

2

Interviews

We record your current state and document it centrally.

3

Your Model

Created with Innovator & ArchiMate® and continuously updated.

Let's Talk about Your EAM Project

Book a free, non-binding initial consultation with our EAM experts.
